Acrycrete

Avoid costly tear outs by restoring with Acrycrete

About Acrycrete:

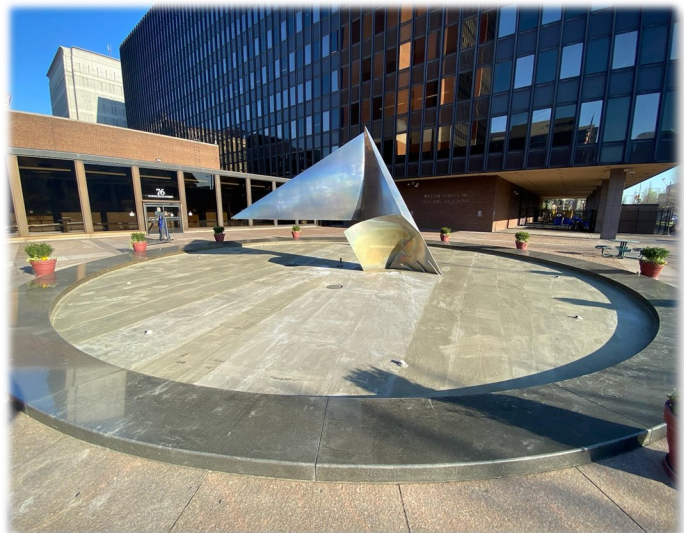

Acrylabs Acrycrete is a specialty product that combines portland cement with an advanced polymer formulation to create an extremely versatile and hard wearing finish. Acrycrete bonds to all cleaned and prepped concrete surfaces and is easy to use. It can also be applied to the standard Acrylabs reinforced membrane or it can be coated with Acrylabs DEK-coat to create an attractive finish.

Damaged manufacturing and warehouse floors are expensive to replace. Acrycrete can solve a variety of floor issues with minimal disruptions of operations

This worn out parking garage deck was resurfaced using the Acrycrete System, making it water tight and adding many more years of service

This center-city fountain is the pride of the block. Installing the Acrycrete System restored its vibrant look and provided a watertight surface
