

Project Profile

Waterproofing Grain Silos

Acrylabs performs better than any other traditional roofing membranes especially when it comes to protrusions, curbing's, and other details

Project Specifications:

- ◆ Saskatchewan, Canada
- ◆ Treated concrete
- ◆ Multiple Silos averaging 2,000 SF

About the project:

After years of unsuccessful attempts at waterproofing these silos using standard roofing materials, Acrylabs was installed and has been successfully keeping water out of the bins and protecting products from moisture damage. Acrylabs can also be used on grain terminals, bulk storage, and milling facilities.

Decking is much more costly to repair or replace than roofing

The Acrylabs Full System protects and keeps products safe from weather hazards
