

## Project Profile

# Use Of Colors

Exotic colors were formulated using Acrylabs' unique pigment technology

### Project Specifications:

- ◆ Universal Studios, FL
- ◆ Sculpted PUF
- ◆ Project completed in 2002

### About the project:

Sprayed polyurethane foam was sculpted by artists to look like a huge circus tent. Acrylabs reinforced and partially reinforced membranes were applied to waterproof the surface. Finish coat colors were matched to those specified by the architect to give this amusement park building a playful look with colorful tents and treehouses.

Color matching can be performed using actual samples, a national paint manufacturers color code or a Pantone Matching System (PMS) number

The Acrylabs Fabric Reinforced System is still intact and keeping visitors dry

Acrylabs utilizes inorganic powder and pre-dispersed pigments in its formulation to ensure durable and color-fast colors
