

Product Profile

Asphalt Emulsion

About Asphalt Emulsion:

Asphalt Emulsion is a single component product used as a filler over existing composition roofs with ponding or alligatoring conditions. **Asphalt Emulsion** is compatible with existing asphalt based products or over Acrylabs Base System. Cold applied and non-flammable, this product is both corrosion-resistant and waterproof when dry.

Excellent leveler for Tar and Gravel re-roof work. After all or most of the slag is removed, apply several layers of Asphalt Emulsion to get a smooth surface.

Tar and Gravel Roofs are a good candidate for Acrylabs Asphalt Emulsion. After the pea gravel layer is removed, the Asphalt Emulsion is squeegeed over to smooth the surface. Acrylabs R-45 Liquid Applied Roof Membrane - System is then installed.
