

Project Profile

Tar and Gravel

Worn out Tar and Gravel with Asphalt Emulsion ready to be installed

Project Specifications:

- ◆ Manufacturing Facility
Manitoba, Canada
- ◆ Tar & Gravel
- ◆ Approx. 30,000 SF

About the project:

Tar and Gravel can be the most difficult and expensive roof to tear off and replace. After the loose pea gravel is removed, this Acrylabs System utilizes Asphalt Emulsion to fill in the remaining voids, which provides a smooth surface over the embedded gravel. The Acrylabs R-45 System is applied directly to the Asphalt Emulsion to create a monolithic and watertight membrane.

Applying Asphalt Emulsion

Acrylabs smooth finish makes it simpler
to identify issues and makes
maintenance easier
