

# Project Profile

## Project Specifications:

- ◆ Metal Agricultural Panel
- ◆ Marietta, Georgia

A new roof that will last indefinitely with just simple maintenance coat after each decade of service

## About the project:

This aged and failing Ag panel roof was saved with the PR-20 Acrylabs Liquid Applied Roof Membrane - System. After a clean water high pressure power washing, the fasteners and seams were addressed with Acrylabs Brushable Sealant, then all penetrations were addressed with Acrylabs Base Coat and Acrylabs Fabric Reinforcement. Two coats of Acrylabs Finish Coat were then applied to give new life to this metal.

Attempt at re-flashing...

After applying an Acrylabs Fabric system, it gives a leak free completed project

After the important work of washing and addressing the critical areas, the Finish Coat was applied
